OXEN TECHNOLOGY
STRONG. SIMPLE. TRUSTED.

BUSINESS PROTECTION SECURITY

SECURITY TOOLS PROVIDE CONTROLS. OXEN BPS TURNS THEM INTO A MANAGED SECURITY OPERATION.

OXEN Business Protection Security brings approved security telemetry, 24x7x365 SOC monitoring, OXEN escalation and coordination, and customer-facing visibility into one managed service.

A MANAGED PROTECTION FRAMEWORK

01
MONITOR
Continuously monitor approved security data through 24x7x365 SOC services.

02
DETECT
Identify and triage meaningful activity using approved security data and detection capabilities.

03
RESPOND
Investigate escalations, coordinate with customer contacts, and support approved response actions.

04
IMPROVE
Use recurring dashboards and reporting to identify priorities and improve the managed security program.

WHAT YOUR ORGANIZATION GAINS

MANAGED SECURITY MONITORING
Continuous monitoring of approved endpoint, identity, email, network, and cloud security data.

24x7x365 SOC SERVICES
Continuous monitoring, triage, enrichment, initial investigation, and escalation.

VALIDATED SECURITY COVERAGE
Endpoint, identity, email, network, and cloud coverage where included in the approved scope.

CONNECTED SECURITY VISIBILITY
Approved security data connected to Microsoft Sentinel when included in the validated design.

ESCALATION & RESPONSE COORDINATION
OXEN escalation review, customer coordination, response guidance, and service closure.

CUSTOMER REPORTING
Dashboard visibility into coverage, security activity, case handling, and service trends.

WHY BUSINESS PROTECTION SECURITY MATTERS

Many organizations own strong security capabilities but lack the people, process, and visibility to operate them as one program. OXEN BPS brings approved security data, continuous monitoring, clear escalation, coordinated response, and practical reporting into a managed service.

THE QUESTIONS THAT MATTER

- Are meaningful security events monitored around the clock?
- Are alerts investigated and escalated through a defined process?
- Can leadership see coverage, activity, and priorities?
- Are insurance or customer requirements creating new security expectations?

TURN SECURITY SIGNALS INTO A MANAGED RESPONSE PROGRAM

Continuous monitoring. Clear escalation. Coordinated response.
